

Dermacure of Valencia

Post Botox and Dysport Injection Instructions

Thank you for coming to Dermacure for your treatment. Please review the following information carefully to achieve optimum results from your treatment and for the most comfortable recovery. Please feel free to contact us at 661-257-8400 if you have any concerns or questions.

Avoid manipulation of the treated area/s for 3-4 hours following treatment. Do not massage any of the areas of your face that were treated with Botox and Dysport.

This could spread the Botox and Dysport into an area of the muscle where we do not want it to migrate. However, facial exercise in the area of treatment is recommended. (Frown/smile 1 hour) It will encourage the Botox and Dysport to move throughout the muscle in a uniform manner. For instance, if we treat your glabella (the area between your eyebrows) we would want you to frown and/or draw your brows together to encourage the Botox and Dysport to move throughout the muscle.

Do not exercise strenuously after your Botox or Dysport treatment for 24 hours.

It is not uncommon to get a small-reddened area or even a bruise at the site of injection, and with all injections there is always a risk of infection. If any of these matters occur and you are concerned, please call us for a follow up appointment.

Keep your head elevated for several hours after your treatment, do not lie down for 3-4 hours following treatment.

The Botox or Dysport will “take” several days after your treatment. This time varies from patient to patient and even from treatment to treatment. The average number of days for the Botox or Dysport to become evident in its effectiveness is 3-7 days. However, complete results will continue to become apparent for the first 2 weeks after your treatment.

If an area requires a touch-up treatment (additional Botox is provided at \$11 per unit and additional Dysport is provided at \$4.40 a unit) after the initial treatment, it will not be scheduled prior to 2 weeks to allow the Botox or Dysport sufficient time to become totally effective. If you feel an area requires additional treatment, please call the office to schedule a follow up.

Botox and Dysport will usually need to be repeated at 3-month intervals. However this varies by each individual case, result can vary from 2 months to 6 months, and each treatment can have a different result time.

Any other questions or concerns please call the office today at 661-257-8400
